About Us

SAB North America is a focused supplier for the automation, aerospace, medical, high temperature, and robotics industries, providing cable and thermocouple solutions that meet, exceed, and set new standards in the flexible cable market. In addition to flexible cable products, we offer an extensive inventory of high-quality cable accessories, including cord grips, grounding glands and other accessories that complement our flexible control and automation cables.

Whatever the need may be, look to SAB North America for Special Cables that can, for example, help minimize maintenance costs and increase productivity, reduce downtime, and solve specific problems. Here is a small sample of some of the challenges that Special Cables from SAB North America can help address:

- Hybrid designs for multiple functions
- Harsh environments
- Difficult applications
- Industry-specific requirements

For more than 10 years, SAB Bröckskes has been meeting the challenges of developing and optimizing high-voltage cables as well as high-voltage measurement technology for components in electromobility. Many electric vehicles (EV) in agricultural, construction and other specialized applications are using sophisticated, high-voltage electronics to provide greater functionality. The cables at the heart of these systems must be up to the task. They must be able to support higher voltages, withstand harsh conditions, and endure rigorous testing to meet various regulatory requirements. With the HV 1000 C series, SAB has developed new highly robust single-conductor (SC) and multi-conductor (MC) cables for high-voltage wiring in construction, agricultural, and special vehicles.

Cables and connectors used to measure conditions in electric vehicles (EV) and e-mobility systems must be able to handle high voltages while keeping vehicle test personnel and operators safe. The HV measuring cables (DC) and (AC) allow for scoop-proof testing up to 1800 V DC on test benches and test vehicles. Additional cables include B 107 HV cable which is flexible at low temperatures and halogen-free. The B 110 C and B 110 C Sense are halogen-free, silicone-shielded cables with excellent flexibility, flame retardance, good EMC protection and weather resistance.

Additionally, SAB has designed an HV measurement system with HV measuring modules from our partner CSM, which is ideally suited for mobile and stationary use in the field of electromobility (electric vehicles and hybrid vehicles).

SAB's level of speed and service as a supplier is unmatched. SAB lives up to its name in not only flexible cable but also flexible manufacturing.

SAB Cable Assemblies & CSM HV Measuring Modules

A safe and precise measurement of temperatures (thermocouples and PT sensors) and analog signals can be achieved by using CSM HV measuring modules in high-voltage environments. CSM HV measuring modules offer reliable modules tested to DIN EN 61010 ensuring the utmost safety. Due to the multi-level safety concept, a measuring chain can be set up between the sensor and data collection point by special sensor cables and HV measuring modules. In addition, standard sensors for LV environments can be used for HV applications.

The measuring modules are appropriate for use in road tests or for test benches as 19" insert module.
